

## **The Benefits of a PVC Preformed Foldable Pond Liner System**

Whether you want a pond shaped like a kidney, or a pond shaped like a Figure Eight, we have an all-ready made shape for you to choose from. The template that comes with the system is a template that is the same shape as your pond, so there is no waste. The bottom of your pond is protected by the template, which is made from GCI Professional Choice 600 Series Gardening Felt.

Our system comes with all the specifications needed to order all of the supplies and landscaping products for your pond project. This includes pond perimeter, gallons, square footage, and area square footage needed to fit the specific liner shape.

When buying a liner sheet, there are many more requirements needed. You need to buy books on how to build a pond, so you can learn how design your own shape. You also need to calculate the gallons for the filtration system and pump size needed. You need to calculate perimeter, square footage of the pond and pond area needed to fit the pond in your decided area.

There is also a lot of guessing involved when it comes to how your pond will look in the position and location you picked. There is also a common problem of over digging the pond hole, if you don't have a template of the liner shape to work with.

The PVC preformed foldable pond liner system can use any type of filtration system, pond pump, waterfall and spitters, etc. Be a professional with our product, you will like the results.
